

NGUYEN DUC THANG

Software Engineer | Backend-focused

District 12, HCMC • 0985146071 • thangnd.deve@gmail.com • github.com/thangnd-deve

PERSONAL STATEMENT

Backend-focused software engineer with nearly 5 years of experience, specializing in designing scalable, maintainable systems with PHP/Laravel, with hands-on experience handling complex transaction processing and data integrity. Able to go full-stack when needed and fast at adopting and mastering new languages and technologies. Aiming to become a Senior Software Engineer within the next 4 years while contributing to products with real impact.

CORE QUALIFICATIONS

- **Languages:** PHP, JavaScript, Rust
- **Backend:** Laravel (8/10/12/13), CakePHP, RESTful API, WebSocket
- **Frontend:** ReactJS, InertiaJS, jQuery, Tailwind CSS
- **DevOps:** CI/CD, AWS EC2, Docker
- **Databases & Caching:** MySQL, SurrealDB, Redis
- **Web Security:** SQL Injection/XSS/CSRF remediation, SonarQube
- **Version Control:** Git (GitHub, GitLab)

WORK EXPERIENCE

Team Leader, 01/2026 – 05/2026

FAMGIA INC – Ho Chi Minh City

Project: CMS Product, CMS Inventory, Booking Therapist

- Designed business logic and system architecture for the HRM attendance module (currently in UAT); assigned and fully managed tasks for fresher developers.
- Built a map-based therapy booking application: integrated map services to locate the nearest available therapists by user location, with markers and turn-by-turn directions to the selected provider.
- Developed service selection and booking logic, allowing users to choose therapy services and apply coupons at checkout with validation of usage limits and program rules.
- Mentored 2 fresher developers: clarified technical specifications, reviewed pull requests, and guided code refactoring along with best practices for AI-assisted development (Cursor, Claude Code).
- Reviewed, refactored, and debugged AI-generated code to ensure correctness, maintainability, and security (Cursor, Claude Code).
- Built a product and inventory management system to replace manual processes.
- Set up and administered the development environment server.

Tech Stack: Laravel (v12, 13), Inertia.js, ReactJS, Redis, Firebase Notification, Firebase Realtime Database

Software Engineer, 08/2025 – 12/2025

ICENTO Co., Ltd – Ho Chi Minh City

Project: Retail store management system and product administration platform

- Led requirements analysis and system architecture design for a retail management MVP platform.
- Designed and implemented an offline-first architecture enabling stores to keep selling without network connectivity, auto-syncing in under 3 seconds on reconnection with 0% data loss.
- Built 3 core modules from scratch (product digitization, inventory management, sales tracking), digitizing 200,000+ products and cutting manual data-entry time by 90%.
- Developed a dynamic discount/coupon engine supporting 4 program types (event-based, store-based, quantity-based, time-based), with revenue and inventory visualization dashboards.

- Containerized with Docker and deployed to AWS EC2, handling configuration and operational issues to ensure stable system uptime.

Tech Stack: *SurrealDB, Flutter, SvelteKit, Docker*

Full-stack Developer, 03/2024 – 07/2025

VNJ Software Solutions Co., Ltd – Ho Chi Minh City

Project: Warehouse management system and translation system

- Built a master-data import system processing 600,000+ records per batch with validation and deduplication logic, reducing processing time from nearly 20 minutes to 2 minutes.
- Developed order-creation logic with automatic error detection from third-party import files, sending email reports for timely resolution.
- Built new UI from Figma designs and rewrote logic to CakePHP conventions from the client's existing framework.
- Refactored the codebase to SonarQube standards, cutting code smells by 80%, raising test coverage to 90%, and improving performance by 30%.
- Identified and patched security vulnerabilities (SQL Injection, XSS, CSRF), bringing the system up to the client's security requirements.

Tech Stack: *Docker, MySQL, Laravel (8, 10), CakePHP (1), PHP, ReactJS, InertiaJS, jQuery, JavaScript, Tailwind, CSS*

Back End Developer, 09/2021 – 01/2024

Hybrid Technologies Co., Ltd – Ho Chi Minh City

Project: E-commerce, Meeting Minutes Management, Chat AI, User Administration System

- Migrated ride-booking data to a new database with zero data loss; optimized search, improving page load speed by +30%.
- Rebuilt the e-commerce RESTful API from a legacy system, improving page speed by +80% through query optimization and indexing.
- Built a user/company administration portal with RBAC, task management, meeting scheduling, and PDF/Word/Excel export.
- Integrated ChatGPT via WebSocket API Gateway with conversation management and sensitive-word filtering.
- Upgraded the Laravel codebase to v10, resolving compatibility and performance issues.
- Developed a therapist appointment-booking system with approval workflows and automated notifications.

Tech Stack: *Docker, MySQL, Laravel (8, 10), jQuery, JavaScript*

EDUCATION

Bachelor's Degree: Computer Networks and Data Communications — GPA: 3.2/4

Ho Chi Minh City University of Transport – Ho Chi Minh City, Vietnam

HONOURS, CERTIFICATIONS & LANGUAGES

- 2nd Prize, Southern Region Web Skills Competition (2021)
- English: Conversational — able to read and write technical documents

INTERESTS

- Watching films, listening to music
