

NGUYEN DUC THANG

Software Engineer | Backend-focused

DOB: 01/01/2000.

Address: District 12, HCMC.

Tel: 0985146071

Email: thangnd.deve@gmail.com

GitHub: <https://github.com/thangnd-deve>

EDUCATION

Ho Chi Minh City University of Transport

- Major: Computer Networks and Data Communications
- GPA: 3.2/4

ACHIEVEMENTS & CERTIFICATIONS

- 2nd Prize, Southern Region Web Skills Competition 2021
- English: Conversational, able to read and write technical documents

WORK EXPERIENCE

1. FAMGIA INC

Team Leader

01/2026 - 05/2026

Project: CMS Product, CMS Inventory, Booking Therapist.

- Mentored 2 fresher developers: Clarified technical specifications, reviewed pull requests, and guided code refactoring along with best practices for AI-assisted development (Cursor, Claude Code).
- Reviewed, refactored, and debugged AI-generated code (Cursor, Claude Code) to ensure correctness and maintainability.
- Evaluated security risks in AI-generated code (Cursor, Claude Code).

OBJECTIVE

Backend focused software engineer with nearly 5 years of experience, specializing in designing scalable, maintainable systems with PHP/Laravel, with hands-on experience handling complex transaction processing and data integrity. Able to go full-stack when needed and fast at adopting and mastering new languages and technologies. Aiming to become a Senior Software Engineer within the next 4 years while contributing to products with real impact.

SKILLS

- PHP, JavaScript, Rust.
- Laravel (8/10/13), CakePHP, RESTful API, WebSocket.
- ReactJS, InertiaJS, jQuery, Tailwind CSS.
- DevOps (CI/CD, EC2, Docker).
- MySQL, SurrealDB.
- Git (GitHub, GitLab).
- Web Security (SQL Injection, XSS, etc), SonarQube.

- Designed business logic and system architecture for the HRM attendance module (currently in UAT). Assigned and fully managed tasks for fresher developers.
 - Built a map-based therapy booking application: integrated map services to locate the nearest available therapists by user location, with markers and turn-by-turn directions to the selected provider.
 - Developed service selection and booking logic, allowing users to choose therapy services and apply coupons at checkout with validation of usage limits and program rules.
 - Built a product and inventory management system to replace manual processes.
 - Set up and administer the development environment server.
- ◆ Tech Stack: Laravel (v12, 13), Inertia.js, ReactJs, Redis, Firebase Notification, Firebase Realtime Database.

2. ICENTO Co., Ltd

Software Engineer

08/2025 - 12/2025

Project: **Retail store management system and product administration platform**

- Led requirements analysis and system architecture design for a retail management MVP platform.
 - Designed and implemented an offline-first architecture enabling stores to keep selling without network connectivity, auto-syncing in under 3 seconds on reconnection with 0% data loss.
 - Built 3 core modules from scratch (product digitization, inventory management, sales tracking), digitizing 200,000+ products and cutting manual data-entry time by 90%.
 - Developed a dynamic discount/coupon engine supporting 4 program types (event-based, store-based, quantity-based, time-based), with revenue and inventory visualization dashboards.
 - Containerized with Docker and deployed to AWS EC2, handling configuration and operational issues to ensure stable system uptime.
- ◆ Tech Stack: SurrealDB, Flutter, SvelteKit, Docker.

3. VNJ Software Solutions Co., Ltd

Full-stack Developer

03/2024 - 07/2025

Project: **Warehouse management system and translation system**

- Built a master-data import system processing 600,000+ records per batch with validation and deduplication logic, reducing processing time from nearly 20 minutes to 2 minutes.
- Developed order-creation logic with automatic error detection from third-party import files, sending email reports for timely resolution.

- Built new UI from Figma designs and rewrote logic to CakePHP conventions from the client's existing framework.
 - Refactored the codebase to SonarQube standards, cutting code smells by 80%, raising test coverage to 90%, and improving performance by 30%.
 - Identified and patched security vulnerabilities (SQL Injection, XSS, CSRF), bringing the system up to the client's security requirements.
- ◆ Tech Stack: Docker, MySQL, Laravel (8, 10), CakePHP (1), PHP, ReactJS, InertiaJS, jQuery, JavaScript, Tailwind, CSS.

4. Hybrid Technologies Co., Ltd

Back End Developer

09/2021 - 01/2024

Project: E-commerce, Meeting Minutes Management, Chat AI, User Administration System

- Migrated ride-booking data to a new database with zero data loss; optimized search, improving page load speed by +30%.
 - Upgraded the Laravel codebase to v10, resolving compatibility and performance issues.
 - Built a user/company administration portal with RBAC, task management, meeting scheduling, and PDF/Word/Excel export.
 - Integrated ChatGPT via WebSocket API Gateway with conversation management and sensitive-word filtering.
 - Rebuilt the e-commerce RESTful API from a legacy system, improving page speed by +80% through query optimization and indexing.
 - Developed a therapist appointment-booking system with approval workflows and automated notifications.
- ◆ Tech Stack: Docker, MySQL, Laravel (8, 10), jQuery, JavaScript.

INTERESTS

- Watching films, listening to music.
